DNSC6315: Machine Learning II

School of Business
The George Washington University

ADMINISTRATIVE INFORMATION

Instructor:	Dr. Long He Associate Professor Department of Decision Sciences School of Business George Washington University	Office:	Funger 415C
		Office Hours:	By appointment
		Email:	longhe@gwu.edu
		Website:	https://business.gwu.edu/long-he
TA:	Mr. Dhairya Shah	Email:	d.shah@gwmail.gwu.edu

COURSE OUTLINE

No.	Topic	Text
1	o Inventory Allocation in Online Retailing o Tree Models for Classification and Regression	[ISLR §8.1]
2	Model Performance on Classification Problems o Expected Value Framework o Visualizing Model Performance	[DSB §7, §8]
3	Multiclass Classification o Transformation to binary o Multinomial Logit (MNL) Model	
4	o Ensemble Methods: Bagging, Random Forest, Boosting o Neural Networks	[ISLR §8.2] [ISLR §9.4]
5	Unsupervised Learning o Clustering o Principal Component Analysis (PCA)	[ISLR §12]
6	Analytical Engineering o Churn Prediction o Vehicle Allocation	[DSB §9]

BLACKBOARD (Q&A)

Active participation via the Blackboard course page is required. It is crucial to regularly check Blackboard for important updates, including announcements, handouts, the course schedule, classwork, homework assignments, exams, and other materials. The Blackboard course page also features a Discussion Board where you can engage with your classmates and communicate with me about course-related topics. To stay informed, I recommend subscribing to the discussion forums to receive notifications of new postings.

Please note that I prioritize responding to questions posed through Blackboard. Course-related questions sent via email will generally not be answered unless they are private and not relevant to the rest of the class.

ASSESSMENT

Final grades will be assigned based on the following components:

Component	Weight
Individual Assignments	70%
In-class Quiz (May 01, 2025)	30%
Total	**100%**

Grade Bands (These are approximate and subject to adjustments if necessary):
- **A**: 95% and above
- **A-**: 90% to < 95%
- **B+**: 85% to < 90%
- **B**: 80% to < 85%
- **B-**: 75% to < 80%
- **C+**: 70% to < 75%
- **C**: 60% to < 70%
- **C-**: 50% to < 60%
- **F**: Below 55%

INDIVIDUAL ASSIGNMENT

Assignments will include both conceptual and practical (e.g., coding). While you will complete the assignments individually, you are permitted to use GenAI tools (e.g., ChatGPT). Please refer to "GenAI Guidelines" below. The point values for each assignment may vary. For example, if there are three assignments, and you score 80 out of 100 on Assignment 1, 150 out of 150 on Assignment 2, and 100 out of 120 on Assignment 3, your total points for the Assignment Component of your final grade will be calculated as $(Assignment\ Weight) \times \frac{(80+150+100)}{(100+150+120)}$.

Late Submission: Deliverables must be submitted through Blackboard by the specified due date and time, unless stated otherwise. Extensions will only be granted for valid reasons (e.g., medical emergency, family emergency, religious observances, athletic competitions). Examples of invalid reasons include but not limited to travel plans, social events, computer malfunctions, and pet sitting. Unexcused late submissions will incur a penalty of 10% per day (calculated in whole

days: 1 day late, 2 days late, etc.), including weekends and holidays, for up to three days. Submissions received more than three days after the due date will not be accepted and will receive a grade of zero.

QUIZ

There will be one in-class quiz. Please mark your calendar, as you are expected to take the quiz during class time. Makeup quizzes will only be allowed for valid reasons.

The quiz will be *open* book and consists of True/False questions, Multiple-Choice questions, and calculation problems. Calculators are permitted, but the use of computers, tablets, or phones is prohibited. If you do not have a calculator, you can still earn most points by providing correct formulations, as correct answers could be derived using a calculator.

GenAI Guidelines

You are encouraged to explore generative artificial intelligence (GenAI) tools, such as ChatGPT, to enhance your learning experience. At times, you may be explicitly asked to use ChatGPT and analyze its output for specific problems. When utilizing GenAI tools, it is essential to appropriately *acknowledge* and *cite* their use in your written submissions (e.g., code, reports), including the specific version of the tool employed. Please note that content generated by GenAI tools may not always be accurate or suitable. It is your responsibility to critically evaluate the validity and applicability of any GenAI output included in your submissions. Failure to adhere to these guidelines will be considered a violation of the GW Code of Academic Integrity. Please note that definitions and expectations regarding "plagiarism, cheating, and acceptable assistance" may differ across courses and instructors.

CODE OF ACADEMIC INTEGRITY

Academic integrity violations will be reported. For detailed information, please refer to https://students.gwu.edu/code-academic-integrity.
